

Reduce Cost With Innovative Cloud Image Storage

vRad® VAULTSM

The tidal wave of images does not abate. Hospital and practice rules, government and legal regulations, and common sense dictate that you store them indefinitely. But where? The need for storage is endless ... and costly. You need tools to help you work smarter and faster, without significant capital investment.

Good news. Smarter, faster and less costly have arrived with vRad® VaultSM.

vRad Vault is a primary, secondary and/or disaster recovery image storage solution that provides significant savings over traditional onsite storage and is scalable to your needs.

Cost savings: As a cloud solution, hosted and managed via the Internet, vRad Vault eliminates the need for costly onsite storage hardware and annual service fees. Instead of significant up-front capital investment, you pay a one-time fee for the legal life of the study to be stored.

Long-term storage and access: Cloud-based means you get more capacity as you need it. vRad Vault doesn't fill up, it doesn't break down and it is available for as long as you need. vRad Vault can be seamlessly added to your existing storage strategy giving you rapid, near real-time access to images through vRad® PACSSM, vRad® ResultsSM or your own PACS.

Reliability and security: You can count on vRad Vault with 99.999 percent image availability up time. For your security, multiple copies of images are stored in multiple systems within vRad Vault. The security of your data is further bolstered by the high levels of physical and network security, redundant power and environmental conditioning of the U.S.-based world-class data centers in which vRad Vault is hosted.

Flexibility for the future: You can easily migrate the data in your existing systems to vRad Vault at a very low cost thanks to our data migration solution. Should you ever want your data back from vRad Vault, all of your archived data can be retrieved in a DICOM-compatible format at no cost.

VIRTUAL RADIOLOGIC®

What is cloud computing?

- Broadly speaking, any Internet-based service or technology solution
- Can eliminate local capital expenditures and maintenance fees
- Lower risk, pay-as-you-go model
- Nearly unlimited capacity

Sign of the future? Microsoft is “betting our company” on the cloud. —Steve Ballmer, Microsoft CEO, March 4, 2010

World-class data centers host vRad Vault.
